

# Project PoC – Issues to be addressed

## Deliverables expected on a GitHub repository

- Self-documenting code (ex: [numpy style](#))
- Reference dataset (collected and/or produced), code to produce them
- Report

## Report outline

- Introduction to the problem and its modeling
- Criteria for assessing a solution
- Overview of reference dataset and their metrics (collected and/or produced)
- Modeling problem solving (ex: [pseudocode](#), [class diagram](#), [activity diagram](#)) and estimate time and space complexity
- Narratives and use cases (reproducible)
- Numerical experiments on the dataset, results tables
- Experiment analysis (benefits, limits ...) and feedback on publication (reproducibility, omitted hypotheses ...)
- References
